Empathy Map Canvas:

The following mapping exercises explore user perceptions and expectations to gain a profound grasp of essential buyer needs. This approach encourages a user-centric design strategy that bridges technical development objectives with real-world usability benchmarks for the ShopEz system.

<u>Think & Feel</u> • Is my personal information kept private? • Does the product photo match the actual item? • Will my order arrive on time and in good shape? • I value both reasonable pricing and platform stability.	<u>See</u> • High-resolution product galleries. • Price comparisons vs other retailers. • A clean, mobile-optimized interface. • Real-time tracking notifications.
<u>Hear</u> • Positive feedback on system reliability. • Recent style trends on social feeds. • Talk about data safety in online retail. • Direct recommendations from colleagues.	<u>Say & Do</u> • Registers an account and browses items. • Filters products by size and color. • "I want a fast and uncomplicated checkout process." • Surfs through different lifestyle categories.

Pain Points

- FRUSTRATING SIGNUP STEPS.
- Lags and slow loads on mobile browsers.
- Vague shipment timelines.
- Hard-to-use search and filtering.

Gains

- Fast response using MERN stack.
- Relevant search results in secondary.
- Centralized portal for orders.
- Smart inventory tools for managers.
