

Ideation Phase

Brainstorm & Idea Prioritization

Date	18 June 2026
Student Name	ALLADI MANJUNADH (alladimanjunadh07@gmail.com)
Team ID	
Project Name	ShopEz
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Adopting a methodical brainstorming framework enables the systematic identification of critical software objectives and fundamental system designs. This process focuses on evaluating and organizing vital features for the ShopEz MERN-based platform, ensuring that the expected technical scope remains aligned with achievable project milestones.

Step-1: Selection of the Problem Statement

Problem Identification: Modern online consumers demand a fluid, high-performance, and unified shopping experience across various devices. Many traditional e-commerce frameworks struggle with fragmented management systems or lack integrated mechanisms for live shipment monitoring within a single, modern tech stack.

Selected Problem Statement: "How can we develop a comprehensive MERN-stack application that provides customers with a frictionless product discovery and checkout experience, while equipping administrators with a secure and powerful management console?"

Step-2: Brainstorm, Idea Listing and Grouping

Categorization of essential concepts identified during the individual technical ideation phase:

User Interface (Frontend)

- Responsive product catalog built with React
- Dynamic CSS styling for varied product lines
- Interactive search bars and detailed filter systems
- Comprehensive cart state handling via Redux

Backend & Logic

- Secure authentication using JSON Web Tokens
- Scalable API architecture using Express.js
- Integration of shipment status and activity logs
- Real-time inventory synchronization logic

Database (MongoDB)

- Structured data modeling for core business logic
- Optimized indexing for fast category browsing
- External cloud storage for media assets

Admin Features

- Protected merchant control panel
- Full CRUD operations for product inventory
- End-to-end order workflow management

Step-3: Idea Prioritization

Evaluation of core project components based on their impact and implementation viability to ensure a successful MVP (Minimum Viable Product) delivery.

Feature Category	Importance (High/Med)	Feasibility (High/Med)	Priority Level
MERN Infrastructure & DB Setup	High	High	Critical (Phase 1)
Secure User & Admin Auth	High	High	Critical (Phase 1)
Merchant Management Interface	High	Medium	High (Phase 2)
Advanced Search & Filtering	Medium	High	Standard (Phase 2)
Real-time Order Tracking	Medium	Medium	Secondary (Phase 3)
